Audiobooks

Audiobooks on Android

- [Using Audioserve](#)
- [Prologue for IOS](#)
- [Booksonic](#)

Using Audioserve

Getting the App

Download the apk file here:

[AudioServe-Android](#)

Sideloading APK:

When you download an apk off the internet, by default Android will not let you install it for security reasons (It's not a great idea to install random apks from unknown sources). The process to allow installation is a little different depending on you version of Android. On newer versions it will ask you if you want to "allow installation from this app" on older versions of android, you may need to enable installations from unknown sources in your settings. If you can't find these for your make and model of phone, google is your friend.

App Configuration

The Server URL:

https://audioserve.ummactually.com/
(it's important that you include all the slashes),

The Shared Secret:

It's my wifi password if you know that. If you don't know that, reach out to me.

Group:

Set this to your name or something similar, this is used to keep track of your playback,

Other Settings:

The rest of the settings you can leave the way they are or play around with,

after that the menu on the left should have all my books if you click,"browse collections"

Prologue for IOS

Get this app, and connect it to your plex account. I have a Library for Audiobooks there.

Booksonic

If you're still trying to use Booksonic, I'd really recommend switching over to Audioserve.
